

What's new in version 3.3

Please ensure you backup your logs before downloading this new version.

Changes/fixes:

1. Fixed the date/time screen where Now & Done buttons crashed the app.
2. Added a Now button to the QSO log screens (for current date/time) so that users can skip the extra step of having to select a UTC Date/Time from a different screen. Note, the UTC Date/Time screen is still available.
3. Tidied up Download sites in Settings. It now displays **New** next to an Award when there has been an update. This was not working properly before.
4. Fixed Find Sites where sites with distances beyond the radius were showing in the list.
